

WALL SNAKE

For Controlled Flexibility and Strength!

Coated Fiberglass Wall Snake – 4.5 mtr in length!

The rectangular shape of this rod affords a **FLEXIBILITY THAT NO ROUND ROD CAN OFFER**, yet does not lose strength when being pushed — applying force against the wide side. By simply turning it 180 degrees it practically bends back on itself, as the photo indicates. It certainly does not take the place of a round rod, but has a place along side it for those difficult short turns and bends. Using this product when needed will save the installer from demanding too much from his round product, saving it for the jobs they were intended for. Polypropylene coating eliminates splintering. Often used in support of PP6 Rods.

Product Code: **WS15R**

Utmost strength in
one direction...

...ample ability to bend
in the other!

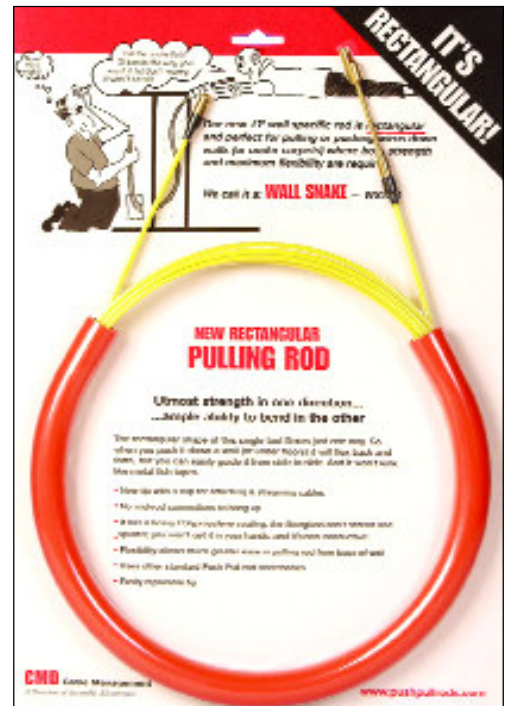

This end is supplied with a bullet tip for penetrating insulation. The other end has a new tip with a metal cup or saddle for streaming cables.

Simply lay the cable or cables in the cup saddle, and tape them in place.

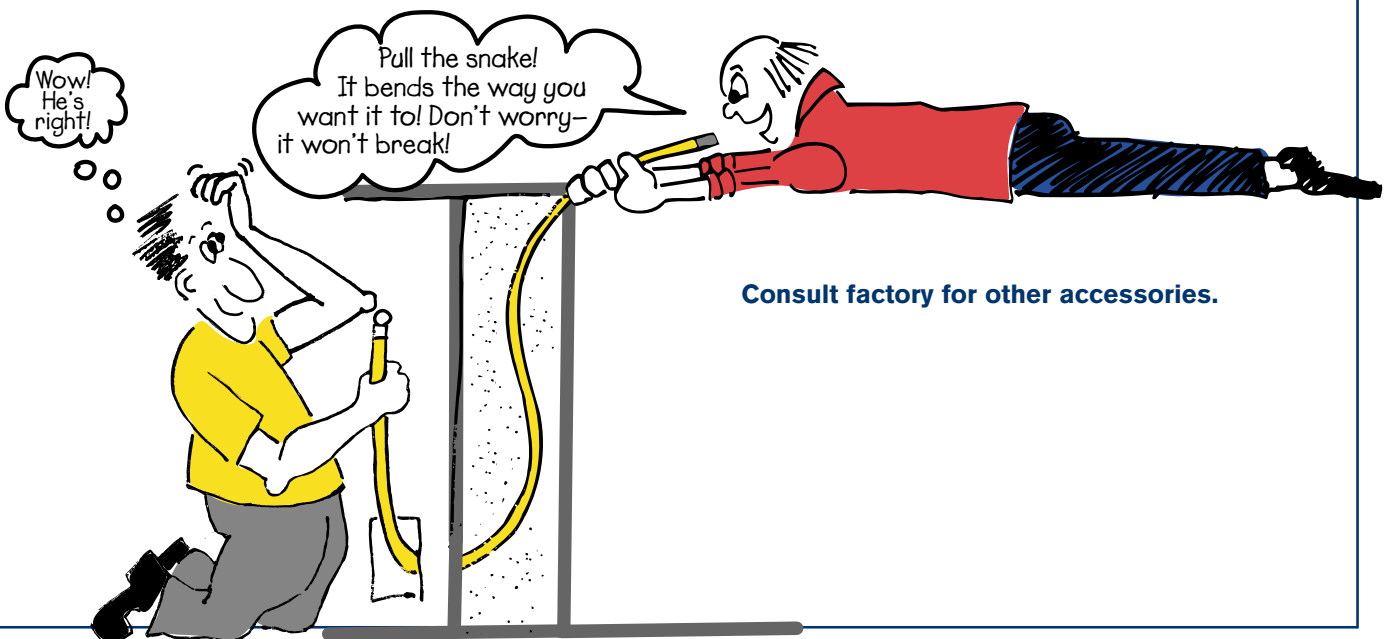

RECTANGULAR SHAPE!

A coated fiberglass rectangular snake that goes where a round rod can't!

- Extremely portable and light-weight.
- Comes coiled in PVC dispenser less than 30 cm in diameter and lighter than 1 kg.
- Non-conductive polypropylene coated fiberglass won't rust or corrode as with metal fish.
- Rectangular snake will accommodate 90 degree bends in 25 mm conduit and can easily penetrate blown-in insulation.
- Can be bent 180 degrees within a 75 mm radius but retains memory to a straight line.
- Bright yellow polypropylene coating eliminates the possibility of shattering and is self-lubricating.
- Use primarily inside walls, under floors and between tack strip and wall.
