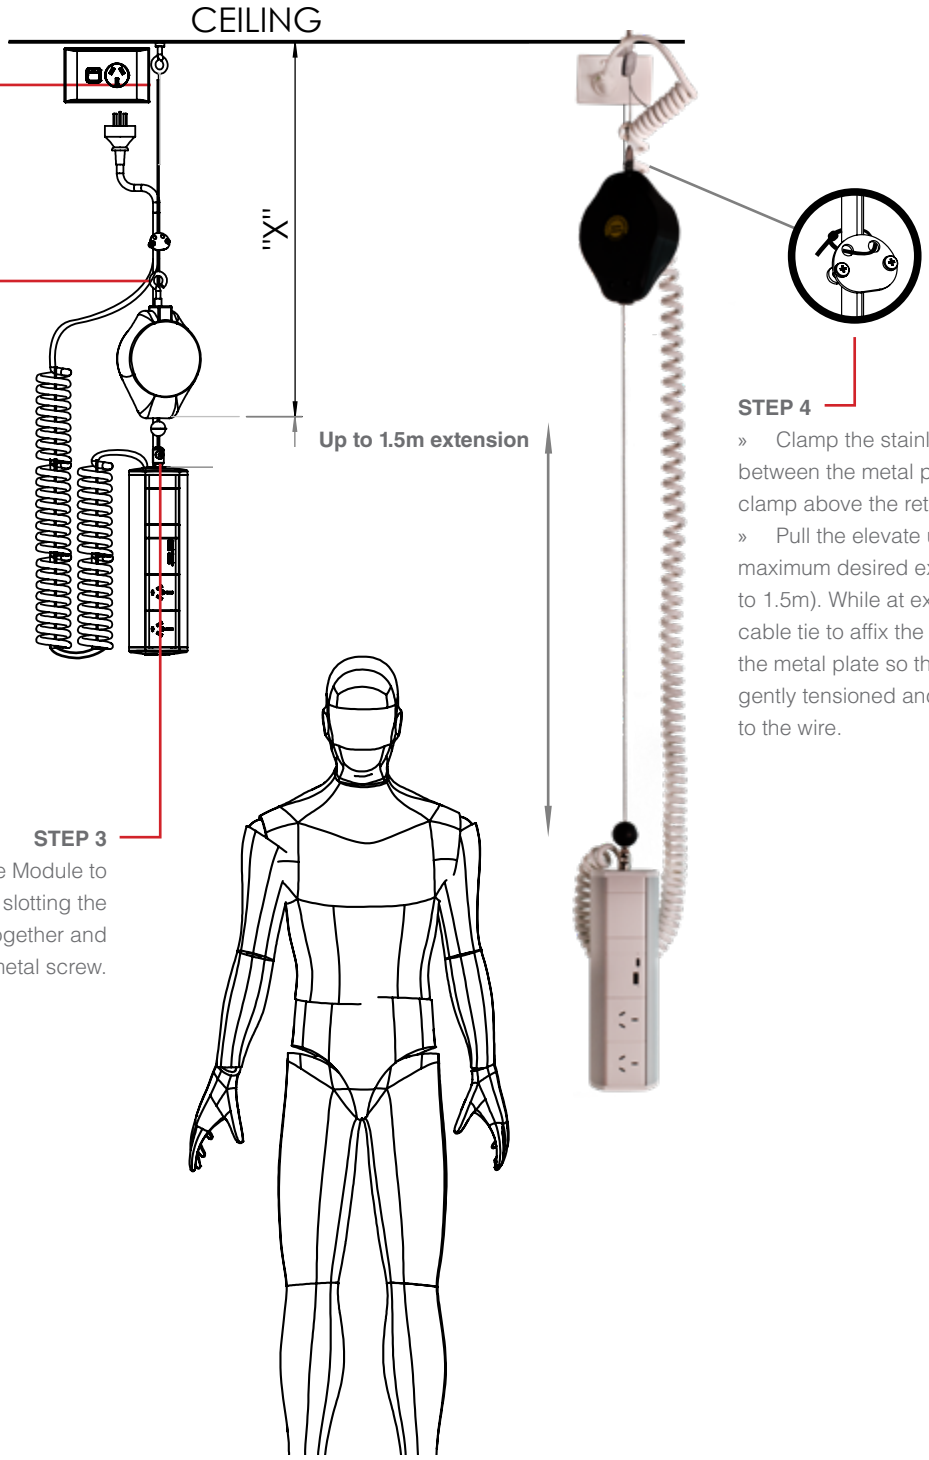
ELEVATE MANUAL INSTALLATION

Retractable Power

WARNING
This product must only be installed by a qualified electrician.
Disconnect power supply before removing the cover, or connecting or disconnecting the product.



STEP 1

» Fasten the eye-bolt to the ceiling and loop and crimp the stainless-steel cable around the eye-bolt.

STEP 2

» Measure the distance from ceiling to base of the retractor at desired height ("X"). Crimp the cable at the appropriate length.

» Note: The Elevate unit will extend down to 1.5m from the retractor unit.

STEP 3

» Attach the Elevate Module to the retractor unit by slotting the metal elbow join together and affixing with provided metal screw.

STEP 4

» Clamp the stainless-steel wire between the metal plate and screw clamp above the retractor unit.

» Pull the elevate unit down to maximum desired extension (up to 1.5m). While at extension, use a cable tie to affix the curly cord to the metal plate so that the cord is gently tensioned and runs parallel to the wire.
