

SOFTWIRING SYSTEM FOR MODERN WORKSPACES

A guide to modular power distribution

What is Softwiring?

Softwiring is a plug-and-play modular power distribution system that uses pre-terminated components to deliver power faster, reduce on-site labour, and create a future-ready power solution*.

It's...
FASTER

Pre-termination means an **up to 85% reduction in installation time**

It's...
FLEXIBLE

Plug-and-play installation means layout changes and upgrades require less labour, downtime, and materials

It's...
SAFER

Pre-terminated cables mean no free-end leads, and our softwiring is compliant and certified to the correct electrical standards**

It's...
SUSTAINABLE

Made-to-specification production reduces material waste and supports efficient end-of-life recovery and recycling

SUITABLE APPLICATIONS

Include retail & hospitality, commercial office, education & training, and healthcare environments

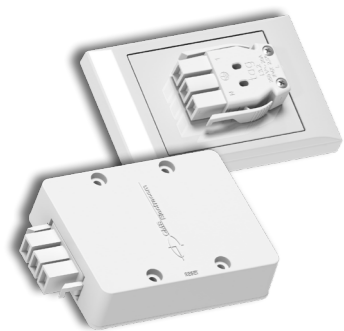

*all statistics are vs. traditional hard-wired installation
 ** Compliant with AS/NZS 3000 (Wiring Rules), AS/NZS3131 (Power Outlets), AS/NZS 61535 (Softwiring Couplers), and AS/NZS 5000 (Cables).

The Softwiring System

CORE COMPONENTS

The softwiring system consists of three key components:

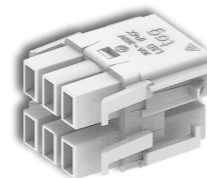

1 STARTER SOCKETS

Initiates a softwiring circuit from the building power supply. Suitable for installation from wall, floor or ceiling.

2 INTERCONNECTING LEADS

Modular backbone of pre-terminated leads used to distribute power throughout the system.

3 SPLITTERS

A modular connection point that distributes power from leads to powered accessories.

SOFTWIRED POWER & ACCESSORIES

CMS Electracom offers a comprehensive range of power, cable management, and ergonomics to complete your softwired solution.

Available in a range of colours and configurations to suit every application.
